The bubble chart displays the relationship between the number of employees (x-axis) and the total value added (y-axis). The x-axis is labeled 'Número de Funcionários' and ranges from 0 to 1,400. The y-axis is labeled 'Valor Agregado Total' and ranges from R\$ 0.0M to R\$ 1.0M. The chart shows a positive correlation, with a dense cluster of points at low employee counts and low value added, and a few outliers at high employee counts and high value added.

The scatter plot, titled "Seller Sales vs Delivery Risk", visualizes the relationship between a seller's late delivery rate and their sales volume. The horizontal axis (X-axis) represents the "Seller Late Delivery Rate" from 0% to 40%, while the vertical axis (Y-axis) represents "Seller Sales" in Brazilian Reals (R\$) from 0K to 200K. The data points are represented by blue circles of varying sizes, indicating the density or volume of transactions. Most sellers are concentrated in the lower-left quadrant, showing low late delivery rates (below 10%) and low sales (below R\$ 50K). A few sellers show higher sales (up to R\$ 200K) at low delivery rates, and others show higher delivery rates (up to 40%) at low sales levels.
